## 1. Overview

This is the very beginning of a user guide. It aims to explain how to use Genuine and is subdivided into the following topics:

### Basics:

- [Using Resources](#): How to use property files?
- [Creating Actions](#): How to create actions?

### Additional infrastructure for creating applications:

- [User Preferences](#): How to integrate a preferences dialog?
- [The Exit Service](#): How to perform individual operations when an application exits?

Please help to extend this user guide and make it more helpful!
